SUMMARY

Product Manager with 3+ years in tech, spanning software engineering and product management, with experience taking AI-powered products from 0 to 1 and scaling them. User-obsessed: I speak directly with users and internal teams, document what I learn, and turn it into clear requirements with edge cases and acceptance criteria. Strong in product discovery, QA and launch readiness, payment flows and operational systems, collaborating with Engineering, Design and Operations to ship products that solve real problems.

EXPERIENCE

Conclase Lagos, Nigeria
Product Manager Jan 2026 – Present

- Own end-to-end product for StacStart: strategy, roadmap, documentation and delivery for an AI-powered platform connecting skills training to job matching across Nigeria, Kenya, Uganda and Ghana.
- Led the product transformation that enabled StacStart to serve as the LMS for iDICE's Federal Government-backed Skills to Jobs programme, now serving 50,000+ learners, while maintaining the existing academy on the same platform.
- Prioritised the product rebuild around learner needs, making bulk account provisioning and tutor/class assignment critical milestones while deferring later-stage job-readiness features.
- Shipped the StacStart MVP, including AI-assisted learning (IntelliTutor), AI job matching, recruiter messaging and a shared recruiter dashboard; spoke directly with learners and recruiters and used their feedback to prioritise improvements across onboarding, cohort management and recruiter experience.
- Product-managed the judging and results platform for the StacStart Hackathon 2026, designing the experience for judges and participants: 323 developers across four countries, 96 submissions and 288 judge scores with written feedback, private team results, role-based permissions and admin correction controls.
- Write PRDs and briefs with user stories, edge cases and acceptance criteria; restructured the software team's SDLC workflow in Jira so delivery, blockers and ownership are visible, and test releases before launch.
- Delivered client software including the Pitchigh LMS, and was named Staff of the Quarter for Q2 2026.

Mimuads AI Lagos, Nigeria
Co-Founder (Product) Oct 2025 – Present

- Co-founded a self-serve marketplace that turns idle screens in pharmacies, eateries and high-dwell venues into ad inventory; brands pay only for human attention verified by on-device computer vision, with no agency retainers or minimum spend.
- Validated venue supply before building the booking engine, ran separate research for hosts and advertisers, and designed host-first economics: free installation, the larger revenue share and weekly payouts.
- Live with an iOS and Android app, a self-serve campaign dashboard and a screen player that keeps running through network drops; ads go live within 24 hours, and a supply-side API for agencies is in early access.

Splexxlabs Remote
Product Manager (Freelance), Nodecademy Apr 2026 – Aug 2026

- Oversaw the build of Nodecademy's website for a 24-week software engineering school, working with engineering on the experience for tracking applications and receiving payments, and scaling the product during my time on the team.
- Led the build of the LMS supporting all learner activity across five tracks, and wrote problem-first PRDs with user stories and acceptance criteria to drive execution.
- Ran a webinar speaker series with engineers from Meta and Netflix.

SELECTED BUILDS

- **Nevara, Product Lead (Runner-up, ALAT by Wema Buildathon 2026):** payment collection for groups on ALATPay: a unique virtual account per member transaction via the Bank Transfer API, webhooks for real-time dashboard updates, and live transaction monitoring for collectors. Led product strategy, the collection and reconciliation workflow, and the pitch.
- **Zuri, Product Lead (Monnify x API Conference Lagos Developer Challenge):** voice-first money assistant in English, Pidgin, Yoruba and Hausa. Led specs, prioritisation and the end-to-end build of a voice-to-payment flow with real account integration and an independent transaction verification layer, shipped in under a week.

LEADERSHIP AND COMMUNITY

- **GDG on Campus, University of Ilorin, Co-Lead (2024 – 2025):** grew membership 40% in a year, making it the largest GDG on Campus chapter in Sub-Saharan Africa; co-led CareerFest X TechSummit (2,600+ attendees, 100+ volunteers) and secured sponsorships from UAC Foods, Bitnob, CHAOSS and CafeOne by Sterling.
- **She Code Africa, University of Ilorin, Pioneer Chapter Lead (2023 – 2025):** built the chapter to 350+ members.
- **Also:** Team Lead, Tech Revolution Africa 3.0; Technical Lead, GirlsTech; speaker and panelist.

EDUCATION

University of Ilorin, B.Sc. Biochemistry, Second Class Upper — Sep 2021 – Aug 2025
ALX Africa, Software Engineering Diploma — Jan 2023 – Jun 2024

CERTIFICATIONS

Product Strategy Micro-Certification (PSC), Product School — Jan 2026
Agile Project Management
Quality Assurance Essentials for Product Managers, Treford — May 2026
AI Literacy, IBM SkillsBuild — Jun 2026
Career Essentials in Generative AI, Microsoft and LinkedIn Learning — 2023

SKILLS

Product: User research and interviews, Product discovery, PRDs and briefs, Edge cases and acceptance criteria, QA and launch readiness, Prioritisation, Roadmapping, Agile, Scrum
Technical: HTML, CSS, JavaScript, React, Python, APIs and integrations, GitHub
Tools: Jira, Linear, Notion, Figma, Google Analytics, Brevo, Slack, Google Workspace, Claude, ChatGPT, Gemini
Languages: English (Fluent), Yoruba (Native)
